SOLUTION WORDS

recycle (v.)
To process (waste) so as to convert it into a usable form; to make available for processing into a reusable form. Also: to reclaim (a material) from waste so that it may be reused.

evenvironmentally friendly (adj.)
Of a product or process designed, produced, or operating in a way that minimizes harm to the natural environment; (of a person, organization, industry, etc.) adopting measures that minimize harm to the environment; not harmful to the environment.

clean (adj.)
Of a fuel, source of energy, technology, etc.: (originally) producing few air pollutants; (in later use also, and now chiefly) producing relatively few or no net emissions of greenhouse gases.

vertical farming (n.)
The commercial cultivation of crops for human consumption in multiple layers or levels in a building or other structure, often with the help of artificially controlled lighting and nutrients.

kaitiakitanga (n.)
Guardianship or management, esp. of the natural resources of a place or area; environmental stewardship considered as a duty and responsibility of the inhabitants of an area. Originally in Māori contexts: now in more general use

More solution words:
zero-waste. (n.) With reference to the manufacture or distribution of a product, generation of very little or no waste.
sustainable. (n.) Designating forms of human activity in which environmental degradation is minimized, esp. by avoiding the long-term depletion of natural resources.
rewild. (v.) To return land to a wilder and more natural state.
green (adj.) Of a product, service, etc.: designed, produced, or operating in a way that minimizes harm to the natural environment.
